Question: Endianness

What are the memory address of these four words?

Answer: Endianness

What are the memory address of these four words?
Same as the address of the lowest-address Byte
(this is true for either Little-Endian or Big-Endian ordering)

	32-bit Words	Bytes	Addr.
Word 3	Addr = 0x0012		0015
			0014
			0013
			0012
Word 2	Addr = 0x0008		0011
			0010
			0009
			0008
Word 1	Addr = 0x0004		0007
			0006
			0005
			0004
Word 0	Addr = 0x0000		0003
			0002
			0001
			0000

Question: Endianness

- Q: Assume Big-Endian ordering. If a 32-bit word resides at memory address N, what is the address of:
 - (a) The MSB (Most Significant Byte)
 - (b) The 16-bit half-word corresponding to the most significant half of the word
- Q: Redo the question assuming Little-Endian ordering.

Big-Endian

Little-Endian

Answer: Endianness

- A: With Big-Endian ordering:
 - (a) Address of MSB: N
 - (b) Address of 16-bit half-word corresponding to the most significant half of the word: N (the half-word has address range of $[N, N+1]$, so its address is N)
- With Little-Endian ordering:
 - (a) Address of MSB: $N+3$
 - (b) Address of 16-bit half-word corresponding to the most significant half of the word: $N+2$ (the half-word has address range of $[N+2, N+3]$, so its address is $N+2$)

Question: Endianness

The word stored at address `0x20008000` with Big-Endian ordering is

The word stored at address `0x20008000` with Little-Endian ordering is

Memory Address	Memory Data
<code>0x20008003</code>	<code>0xA7</code>
<code>0x20008002</code>	<code>0x90</code>
<code>0x20008001</code>	<code>0x8C</code>
<code>0x20008000</code>	<code>0xEE</code>

Answer: Endianness

The word stored at address 0x20008000 with Big-Endian ordering is

0xEE8C90A7

The word stored at address 0x20008000 with Little-Endian ordering is

0xA7908CEE

Memory Address	Memory Data
0x20008003	0xA7
0x20008002	0x90
0x20008001	0x8C
0x20008000	0xEE

Endianness only specifies byte order, not bit order in a byte!

Endianness

```
LDR r11, [r0]  
; r0 = 0x20008000
```

r11 before load

0x12345678

r11 after load w/
Big-Endian ordering

r11 after load w/
Little-Endian ordering

Memory Address	Memory Data
0x20008003	0xA7
0x20008002	0x90
0x20008001	0x8C
0x20008000	0xEE

Endianness ANS

```
LDR r11, [r0]  
; r0 = 0x20008000
```

r11 before load

0x12345678

r11 after load w/
Big-Endian ordering

0xEE8C90A7

r11 after load w/
Little-Endian ordering

0xA7908CEE

Memory Address	Memory Data
0x20008003	0xA7
0x20008002	0x90
0x20008001	0x8C
0x20008000	0xEE

Data Alignment

- Assume a byte-addressable memory with a data bus that is 32 bits (4 bytes) wide
- Consider 16 bytes of memory (addresses 0 to 15) arranged as four 32-bit words (4

Address 15	Address 14	Address 13	Address 12
Address 11	Address 10	Address 9	Address 8
Address 7 (MSbyte)	Address 6	Address 5	Address 4 (LSbyte)
Address 3	Address 2	Address 1	Address 0

Well-aligned: each word begins on a mod-4 address, which can be read in a single memory cycle

The first read cycle would retrieve 4 bytes from addresses 4 through 7; of these, the bytes from addresses 4 and 5 are discarded, and those from addresses 6 and 7 are moved to the far right; The second read cycle retrieves 4 bytes from addresses 8 through 11; the bytes from addresses 10 and 11 are discarded, and those from addresses 8 and 9 are moved to the far left; Finally, the two halves are combined to form the desired 32-bit operand:

Address 15	Address 14	Address 13	Address 12
Address 11	Address 10	Address 9 (MSbyte)	Address 8
Address 7	Address 6 (LSbyte)	Address 5	Address 4
Address 3	Address 2	Address 1	Address 0

Ill-aligned: a word begins on address 6, not a mod-4 address, which can be read in 2 memory cycles

		Address 7	Address 6 (LSbyte)
Address 9 (MSbyte)	Address 8		
Address 9 (MSbyte)	Address 8	Address 7	Address 6 (LSbyte)

Question: Data Alignment

- Q: Assume a byte-addressable memory with a data bus that is 32 bits (4 bytes) wide. Consider 16 bytes of memory (addresses 0 to 15) arranged as four 32-bit words (4 bytes each). How many memory cycles are required to read each of the following from memory?
 - (a) A 2-Byte operand read from decimal address 5
 - (b) A 2-Byte operand read from decimal address 15
 - (c) A 4-Byte operand read from decimal address 10
 - (d) A 4-Byte operand read from decimal address 20

Answer: Data Align

Address 15	Address 14	Address 13	Address 12
Address 11	Address 10	Address 9	Address 8
Address 7	Address 6	Address 5	Address 4
Address 3	Address 2	Address 1	Address 0

- Q: Assume a byte-addressable memory with a data bus that is 32 bits (4 bytes) wide. How many memory cycles are required to read each of the following from memory?
 - (a) A 2-Byte operand read from decimal address 5
 - (b) A 2-Byte operand read from decimal address 15
 - (c) A 4-Byte operand read from decimal address 10
 - (d) A 4-Byte operand read from decimal address 20
- A: (a) The operand contains memory content in address range [5,6]. It can be read in 1 memory cycle; the memory controller returns a word in address range [4,7]. The operand can be obtained via 1-Byte offset addressing into the word.
- (b) The operand contains memory content in address range [15,16]. It can be read in 2 memory cycles; the memory controller returns 2 words in address ranges [12,15] and [16, 19], which can be combined to return a word in address range [14,17]. The operand can be obtained via 1-Byte offset addressing into the word.
- (c) The operand contains memory content in address range [10,13]. It can be read in 2 memory cycles; the memory controller returns 2 words in address ranges [8,11] and [12, 15], which can be combined to return a word with address range [10,13].
- (d) The operand contains memory content in address range [20,23]. Since $20\%4=0$, it is well-aligned, and can be read in 1 memory cycle.

Question: Data Align

Address 111	Address 110	Address 109	Address 108
Address 107	Address 106	Address 105	Address 104
Address 103	Address 102	Address 101	Address 100
Address 99	Address 98	Address 97	Address 96

- Q: Assume a byte-addressable memory with a data bus that is 32 bits (4 bytes) wide. Consider 16 bytes of memory (addresses 0 to 15) arranged as four 32-bit words (4 bytes each).
 - (a) What is the address of MSB of the word at address 102,, assuming Little-Endian ordering?
 - (b) What is the address of LSB of the word at address 102,, assuming Little-Endian ordering?
 - (b) How many memory cycles are required to read the word at address 102?
 - (c) How many memory cycles are required to read the half word at address 102?

Answer: Data Align

Address 111	Address 110	Address 109	Address 108
Address 107	Address 106	Address 105	Address 104
Address 103	Address 102	Address 101	Address 100
Address 99	Address 98	Address 97	Address 96

- Q: Assume a byte-addressable memory with a data bus that is 32 bits (4 bytes) wide. Consider 16 bytes of memory (addresses 0 to 15) arranged as four 32-bit words (4 bytes each).
 - (a) What is the address of MSB of the word at address 102, assuming Little-Endian ordering?
 - (b) What is the address of LSB of the word at address 102, assuming Little-Endian ordering?
 - (b) How many memory cycles are required to read the word at address 102?
 - (c) How many memory cycles are required to read the half word at address 102?
- A:
 - (a) MSB of the word at address 102 is 105
 - (b) LSB of the word at address 102 is 102
 - (c) 2 cycles.
 - (d) 1 cycle.

Address 15	Address 14	Address 13	Address 12
Address 11	Address 10	Address 9	Address 8
Address 7	Address 6	Address 5	Address 4
Address 3	Address 2	Address 1	Address 0

Answer: Memory Cycles

- Q: Assume a byte-addressable memory with a data bus that is 32 bits (4 bytes) wide.
 - It takes _____ memory cycle(s) to read a Byte from memory
 - It takes _____ memory cycle(s) to read a half-word from memory
 - It takes _____ memory cycle(s) to read a word from memory
 - It takes _____ memory cycle(s) to read a double word from memory

Address 15	Address 14	Address 13	Address 12
Address 11	Address 10	Address 9	Address 8
Address 7	Address 6	Address 5	Address 4
Address 3	Address 2	Address 1	Address 0

Answer: Memory Cycles

- Q: Assume a byte-addressable memory with a data bus that is 32 bits (4 bytes) wide.
 - It takes _____ memory cycle(s) to read a Byte from memory
 - It takes _____ memory cycle(s) to read a half-word from memory
 - It takes _____ memory cycle(s) to read a word from memory
 - It takes _____ memory cycle(s) to read a double word from memory
- A:
 - It takes ___1___ memory cycle(s) to read a Byte from memory
 - It takes ___1 or 2___ memory cycle(s) to read a half-word from memory
 - It takes ___1 or 2___ memory cycle(s) to read a word from memory
 - It takes ___2 or 3___ memory cycle(s) to read a double word from memory (a double word may span at most 3 consecutive words in memory)

Question: Arrays

- Q: If the first element of a one-dimensional array `x[]` is stored at memory address `0x12345678`, what is address of the second element if the array `x[]` contains
 - (a) chars
 - (b) shorts
 - (c) ints
 - (c) longs

Answer: Arrays

- Q: If the first element of a one-dimensional array $x[]$ is stored at memory address $0x12345678$, what is address of the second element if the array $x[]$ contains
 - (a) chars
 - (b) shorts
 - (c) ints
 - (c) longs
- A: $x[1]$'s address is x 's address plus the data type size in Bytes
 - (a) chars: $0x12345678 + 1 = 0x12345679$
 - (b) shorts: $0x12345678 + 2 = 0x1234567A$
 - (c) ints: $0x12345678 + 4 = 0x1234567C$
 - (c) longs: $0x12345678 + 8 = 0x12345680$
