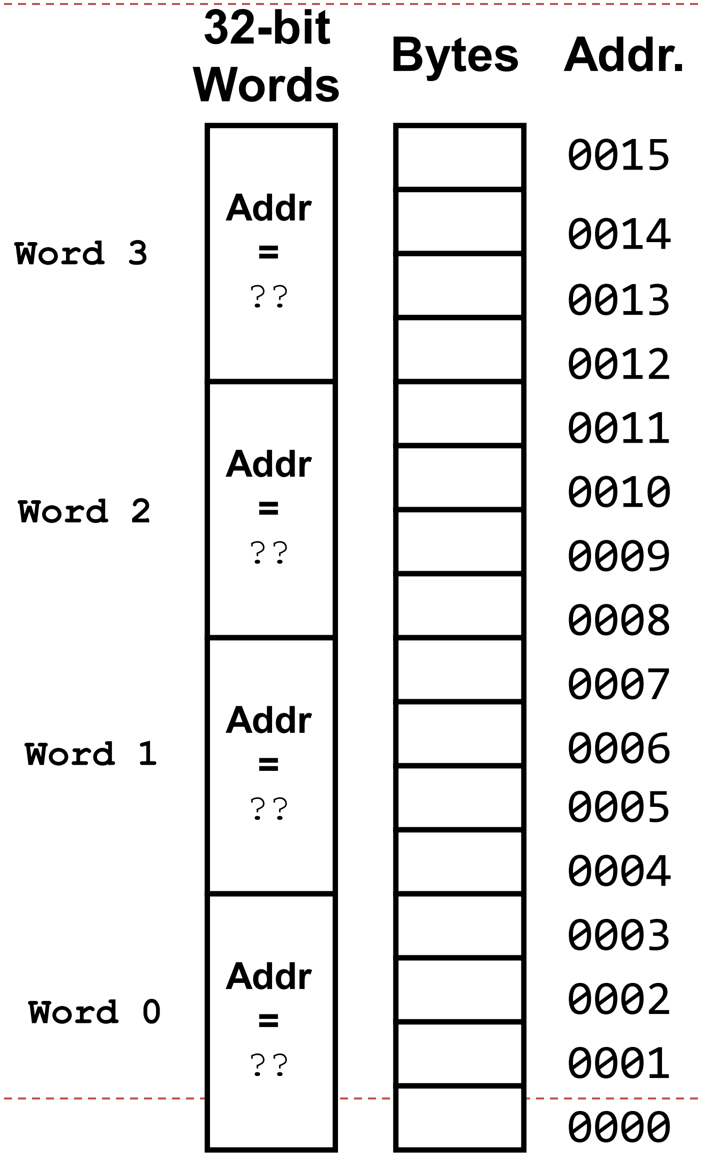
Question: Endianness

What are the memory address of these four words?



32-bit Words

Bytes

Addr.

Word 3

Addr = ??

Word 2

Addr = ??

Word 1

Addr = ??

Word 0

Addr = ??

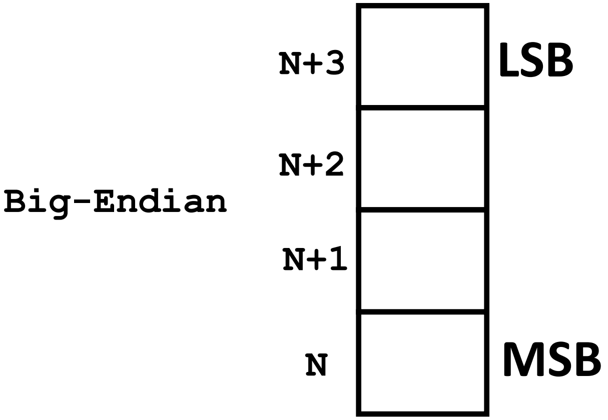
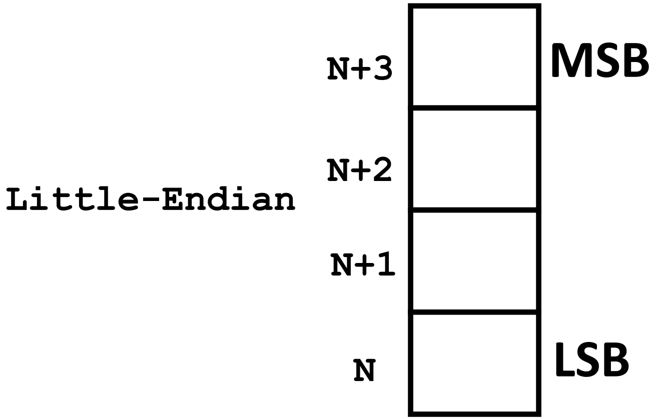
0000

Question: Endianness

- Q: Assume Big-Endian ordering. If a 32-bit word resides at memory address N, what is the address of:
  - (a) The MSB (Most Significant Byte)
  - (b) The 16-bit half-word corresponding to the most significant half of the word
- Q: Redo the question assuming Little-Endian ordering.





Question: Endianness

The word stored at address 0x20008000 with Big-Endian ordering is

?

The word stored at address 0x20008000 with Little-Endian ordering is

?

Memory Address	Memory Data
0x20008003	0xA7
0x20008002	0x90
0x20008001	0x8C
0x20008000	0xEE

Endianness

```
LDR r11, [r0]
; r0 = 0x20008000
```

r11 before load

0x12345678

r11 after load w/ Big-Endian ordering

r11 after load w/ Little-Endian ordering

Memory Address	Memory Data
0x20008003	0xA7
0x20008002	0x90
0x20008001	0x8C
0x20008000	0xEE

Review

Data Alignment

- **Assume a byte-addressable memory with a data bus that is 32 bits (4 bytes) wide**
- **Consider 16 bytes of memory (addresses 0 to 15) arranged as four 32-bit words (4**

Address 15	Address 14	Address 13	Address 12
Address 11	Address 10	Address 9	Address 8
Address 7 (MSbyte)	Address 6	Address 5	Address 4 (LSbyte)
Address 3	Address 2	Address 1	Address 0

Well-aligned: each word begins on a mod-4 address, which can be read in a single memory cycle

The first read cycle would retrieve 4 bytes from addresses 4 through 7; of these, the bytes from addresses 4 and 5 are discarded, and those from addresses 6 and 7 are moved to the far right;
The second read cycle retrieves 4 bytes from addresses 8 through 11; the bytes from addresses 10 and 11 are discarded, and those from addresses 8 and 9 are moved to the far left;
Finally, the two halves are combined to form the desired 32-bit operand:

Address 15	Address 14	Address 13	Address 12
Address 11	Address 10	Address 9 (MSbyte)	Address 8
Address 7	Address 6 (LSbyte)	Address 5	Address 4
Address 3	Address 2	Address 1	Address 0

Ill-aligned: a word begins on address 6, not a mod-4 address, which can be read in 2 memory cycles

		Address 7	Address 6 (LSbyte)

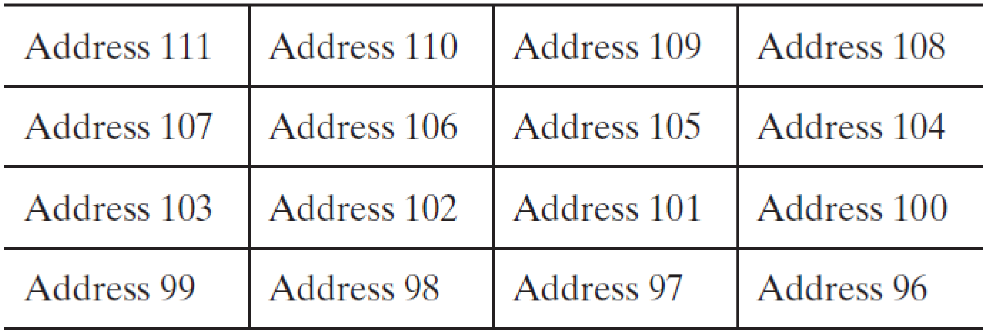
Address 9 (MSbyte)	Address 8		

Address 9 (MSbyte)	Address 8	Address 7	Address 6 (LSbyte)

Question: Data Alignment

- Q: Assume a byte-addressable memory with a data bus that is 32 bits (4 bytes) wide. Consider 16 bytes of memory (addresses 0 to 15) arranged as four 32-bit words (4 bytes each). How many memory cycles are required to read each of the following from memory?
  - (a) A 2-Byte operand read from decimal address 5
  - (b) A 2-Byte operand read from decimal address 15
  - (c) A 4-Byte operand read from decimal address 10
  - (d) A 4-Byte operand read from decimal address 20

Question: Data Align



Address 111	Address 110	Address 109	Address 108
Address 107	Address 106	Address 105	Address 104
Address 103	Address 102	Address 101	Address 100
Address 99	Address 98	Address 97	Address 96

- Q: Assume a byte-addressable memory with a data bus that is 32 bits (4 bytes) wide. Consider 16 bytes of memory (addresses 0 to 15) arranged as four 32-bit words (4 bytes each).
  - (a) What is the address of MSB of the word at address 102, , assuming Little-Endian ordering?
  - (b) What is the address of LSB of the word at address 102, , assuming Little-Endian ordering?
  - (b) How many memory cycles are required to read the word at address 102?
  - (c) How many memory cycles are required to read the half word at address 102?

Answer: Memory Cycles

Address 15	Address 14	Address 13	Address 12
Address 11	Address 10	Address 9	Address 8
Address 7	Address 6	Address 5	Address 4
Address 3	Address 2	Address 1	Address 0

- Q: Assume a byte-addressable memory with a data bus that is 32 bits (4 bytes) wide.
  - It takes _____ memory cycle(s) to read a Byte from memory
  - It takes _____ memory cycle(s) to read a half-word from memory
  - It takes _____ memory cycle(s) to read a word from memory
  - It takes _____ memory cycle(s) to read a double word from memory

Question: Arrays

- Q: If the first element of a one-dimensional array x[] is stored at memory address 0x12345678, what is address of the second element if the array x[] contains
  - (a) chars
  - (b) shorts
  - (c) ints
  - (c) longs

LDM

- Assume that memory and registers r0 through r3 appear as follows. Suppose r3 = 0x8000. Describe the memory and register contents after executing each instruction (individually, not sequentially):
  - LDMIA r3!, {r0, r1, r2}
  - Or LDMIB r3!, {r2, r1, r0}

	Memory Address	Memory Data
	0x8010	0x00000001
	0x800c	0xFEEDDEAF
	0x8008	0x00008888
	0x8004	0x12340000
r3 →	0x8000	0xBABE0000

LDR

- Suppose R2 and R5 hold the values 8 and 0x23456789 After following code runs on a Big-Endian system, what value is in R7? How about in a little-endian system?
  - STR R5, [R2, #0]
  - LDRB R7, [R2, #1]
  - LDRSH R7, [R2, #1]
  - LDRSH R7, [R2, #2]
